

700 series

The **BL7000** is a stand alone battery powered electronic pushbutton code lock. This lock has a cast steel construction for durability and strength and is supplied with a 60-70mm adjustable stainless steel latch with an anti-thrust pin. It can suit a door thickness of 30 to 54 mm and can be easily reversed to suit either left or right hand doors. It has a key override for extra control and for emergency access. There are 31 different user codes in the standard unit with 1 mastercode, and there is a free passage feature when security is not required. To avoid disruption and for convenience the code can be changed on the door.
