

900
series

The **BL9000** is a stand alone battery powered biometric and pushbutton lock. This lock has a cast steel construction for durability and strength and is supplied with a 60-70mm adjustable stainless steel latch with an anti-thrust pin. It can suit a door thickness of 30 to 54 mm and can be easily reversed to suit either left or right hand doors. It has a key override for extra control and for emergency access. There can be up to 119 different fingerprints including 1 master fingerprint held within the unit, and there is a free passage feature when security is not required. To avoid disruption and for convenience fingerprints can be added or deleted whilst the unit is still on the door.
