

The **Marine Grade** series offers a comprehensive range of mechanical access control solutions that have been developed specifically for marine applications whereby compliance to the ISPS code is essential. The Marine Grade series offers the perfect solution for applications where it is not possible or convenient to use an electronic door control.

Manufactured to the highest standards using stainless steel for all of the critical internal components the Marine Grade series has undergone extensive testing to ensure that the coding chamber is resistant to salt water corrosion. The exterior bodies have been chrome plated using a special 5 layer process that is guaranteed to last for at least 2 years under the most arduous of conditions.

Features

- NEW** Patented Load Plate Design Eliminates Code Cracking Attempts
- Salt Waterproof
- 100,000 Cycle Test
- MG PVD Coating
- Holdback / Free Passage Feature
- Early Clear Plate
- Simple Code Changing
- Reversible
- Guaranteed Against Faulty Material & Workmanship
- 2 Year Guarantee

Borg offers a variety of permutations to suit most marine applications. The BL2601 is based upon the popular BL2000 series and offers the ideal solution for smaller doors that have a lower footfall; supplied complete with a cover that encases the keypad the BL2601 is suitable for on deck locations. The BL2605 provides the same exterior keypad but with a rim deadbolt inside handle that is ideal for situations where a mortised latch is not appropriate.

The BL5200 series use a shortened, straight handle design. Intended for the most heavy duty applications the BL5200 is supplied un-clutched and with the free passage feature removed making it ideal for use with a wide variety of heavier sprung door locks. The BL5201 is supplied complete with the free passage feature and our own 60mm tubular latch; this unit is also clutched to protect the coding chamber from damage.
