Of Panic Hardware
- Guaranteed Against Faulty
Materials & Workmanship
- 5 Year Guarantee
- Suitable for DDA Applications

The BL5001 uses a 60mm (70mm also available) tubular latch with anti-thrust pin. The BL5003 comes complete with a euro-profile lockcase which has a double throw deadbolt and key to latch control, ideal for applications where an extra level of security may be required.

The BL5006 comes complete with a BS3621 5 Lever mortise sash lock making it an ideal retro fit in place of an existing sash lock and lever handle and has the added advantage of offering a secondary level of security.

The BL5008 has been adapted to work with panic and escape devices. Supplied with specially designed spindles that provide an 8mm square drive and a fixing plate that secures the keypad directly to the door, the BL5008 provides the perfect keyless access solution for the exterior of fire escape doors.

The BL5009 uses a mortice night latch with separate anti-thrust pin and can be used in conjunction with a euro-profile half cylinder making it ideal for applications where a key override is necessary without the facility for deadlocking.
