

6000 series

The **New Solo** is a unique coding system designed and engineered in the UK by Borg. Incorporating a single column of 6 buttons the Solo offers a high security sequentially coded method of access control. With a body width of just 40mm the Solo is ideal for narrow stile sections be it aluminium or PVC-U. The free acting keypad handle is permanently clutched to provide no handle resistance until the correct code is entered.

With the Solo, Borg is also introducing a revolutionary method of code changing which eliminates the need to remove coding tumblers from the chamber whilst ensuring that the keypad does not need to be removed from the door.

The Solo is ideal for retro fitting applications as it is adaptable to suit a variety of different fixing and locking centres whilst the 8mm square drive makes it compatible with most multi-point locking devices.

Features

- NEW** Sequential Coding Chamber
- Single Column 6 Button Chamber
- Greater Level of Security
- Free Acting Handle
- Unique On Door Code Changing; No Need to Remove Keypad or Tumblers
- Stainless Steel Chamber
- 70° Handle Rotation Ideal for Multi-Point Locks
- Narrow Housing Perfect for PVC-U & Aluminium Section
- PVD Coated - Lifetime Guarantee on Finish
- Suitable for External Applications

6000 series

The Solo is available in two models; the Solo which is supplied with a separate escutcheon and the Solo 1 which incorporates an extension plate making it suitable for use with 70, 72 & 90mm centres. The Solo 1 offers the perfect upgrade from a standard set of lever handles for PVC-U doors; fitted using the existing fixing centres the Solo 1 can be adapted to suit a number of different locking centres.
